

AI Governance from Build to Release

As AI adoption accelerates, governance is becoming a business imperative not simply a compliance requirement. At Tech Vedika, our AI Governance Platform integrates governance into the AI-assisted engineering lifecycle, from architecture and requirements through coding, database changes, testing, DevSecOps, release and monitoring. Our approach is anchored on four pillars: Structured AI Discipline to establish clear objectives, inputs and quality benchmarks; Governance by Design to embed security, architectural and compliance controls; Human at Every Gate to retain accountability for critical decisions; and Software Engineering Excellence to enable teams to focus on architecture, problem-solving and business outcomes.

This translates governance from periodic oversight into continuous operational control. Automated policy checks, security and quality gates, risk assessments, traceability and audit evidence help identify issues early, while the Governance Hub provides real-time visibility through clear health indicators. In a recent engagement spanning 9 projects across 4 technology stacks, the framework brought consistency, visibility and control across the portfolio. The result: AI-powered engineering that organizations can scale with greater confidence, control & speed.

Customer Speak: Reclaim

Imagine landing in a new city at 8 a.m., hours before your hotel check-in, only to spend the morning dragging heavy luggage instead of exploring or heading for meetings. For business travelers and vacationing families, those precious hours are often wasted. Reclaim, a door-to-door luggage network platform changes that seamlessly by collecting bags from homes, hotels, or cruise terminals and delivering them right to the destination. TechVedika has helped develop the intelligent platform that make this effortless travel experience possible.

“TechVedika has never felt like a vendor, they are our core development team. What sets them apart is their communication, care and responsiveness. When you're building something ambitious, you don't just need execution - you need people who take true ownership and treat your mission as their own. Together, we built a solid foundation that has moved thousands of bags seamlessly and earned the trust of major industry partners. They are an integral part of Reclaim.”

- Akmann Van-Mary, CEO and Founder of Reclaim

Editor's Lens

Welcome to the August edition of Tech Vibes!

Every edition of Tech Vibes reflects a simple belief: meaningful innovation is measured not only by what we build, but by the trust, impact and partnerships we create. This edition showcases that philosophy in action from embedding AI governance into software delivery and contributing to policy conversations in Texas, to expanding our US presence. As technology evolves, we remain committed to engineering solutions that are responsible, scalable, and built for lasting business value.

Team: Apoorva Sattaluri, Abha Agarwal, Ashish Mera, Anurag Reddy, Garima Jaiswal, Dr. Prem Kishore

Key Highlights

- Secured a strategic engagement to engineer and enhance a leading US mortgage loan origination platform.
- Commenced Phase 1 engineering engagement with a leading US barcode technology solutions provider.
- Implementation & support partner for a USA based AI enabled API operating & management platform.

Strengthening Our Texas Presence

City of Richardson

Office of Secretary of State - Texas

Texas Economic Development Corporation

TechVedika's recent leadership visit to the United States reinforced our long-term commitment to Texas and our growing investment in the region. With the opening of another US office in Richardson and the continued support of our Texas partner, Mahesh Nandyala, CEO of Startup Runway, we are expanding our onsite presence and strengthening connections across the state's ecosystem.

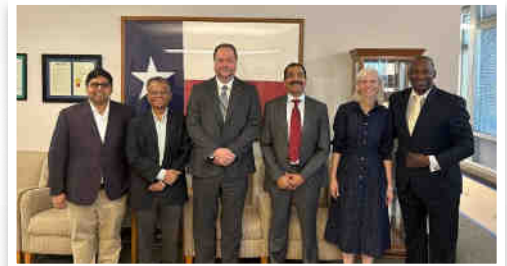

During the visit, our CEO, Sai Sangineni, and Dr. Prem Kishore, Head of Sales & Strategy, engaged with leaders from the Frisco Chamber of Commerce, the Texas Economic Development Corporation, and other public sector organizations. Discussions with Don Magner, City Manager of Richardson, and Eric Beverly, Executive Director of Texas Sunset Advisory Commission, explored how TechVedika can contribute to the state's evolving technology ecosystem.

A key takeaway was Texas' proactive approach to economic development focused on attracting investment, fostering innovation and connecting businesses with the right partners creating a collaborative ecosystem.

During the six-week visit, the leadership team also met with existing clients, reinforcing relationships and gaining insights into evolving business priorities. These regular engagements are central to TechVedika's customer-first approach.

Frisco Chamber of Commerce

Texas-Sunset Advisory Commission

Funtainment Zone

Texas Senate Public Hearing

TechVedika's CEO, Sai Sangineni participated in Texas Senate Finance Committee Hearing on AI for Fraud, Waste & Abuse Prevention and delivered a public testimony on responsible AI adoption and its role in enhancing governance while shaping Texas evolving statewide policy framework.
